NEWSLETTER 3

SEPTEMBER 1 – 15, 2009

ILCE – Avenues continued ..

- **Lean Practice**

Lean Construction is definitely appreciated by one and all.

How to **successfully implement** ?

Lean is more a culture and demands first a mind set change from the top management.

Lean demands a continuous effort by all players to do more and more with less and less (Kaizen approach)

And that too, in all the processes at site.

A very tall task!

Admitted, Lean Construction principles and techniques are already adopted and implemented by successful construction practitioners in their day to day activities.

But generally these are in isolated processes and thus do not have sustainability.

Lean Construction, however, is an integrated concept to be adopted in full in all the processes at site.

But with isolated processes it can mean only a start of the Lean Journey.

ILCE will focus on the education of Lean Construction and roadmap its implementation at site.

ILCE will have on its panel, engineers of high caliber for such propagation.

- **Innovation and Application**

ILCE will encourage and provide industry academia interface for applied research and case studies in topics akin to Lean e.g.

- Wastages in Indian Construction processes at site.
- Effective 3 D techniques for improving project management.
- East versus West – Comparison of project management in Western world as against Indian industry.

- **Global Interaction**

ILCE will conduct Seminars, workshops, discussions with Western world academics and practitioners of Lean Construction.

VOLUNTEERS FOR ENPANELMENT IN ILCE (Details on Contact)

Thoughts

“Lean in Construction is probably the toughest application but it has also one of the highest payouts.”
